

WARRANTY REQUEST FORM

This document constitutes a formal request for issuance of an Impermitek warranty and must be submitted upon completion of the relevant project.

Pursuant to the Authorized Contractor Agreement and applicable Impermitek warranty requirements, eligibility for warranty approval is contingent upon the installation having been completed by an **authorized Impermitek contractor** in accordance with Impermitek specifications, installation requirements, and approved system details, in addition to being supported by adequate **photographic documentation**.

Photographic documentation must provide a clear and complete record of all material stages and layers of the installation, including, without limitation, the original substrate and existing conditions, surface preparation, application and installation stages, system components and details, and the completed installation.

If Impermitek has not previously been provided with access to the required project photos, such documentation must be submitted with this form. Failure to provide sufficient photo-documentation may result in delay, denial, or withholding of warranty approval.

All final project review and inspection requirements remain within the sole discretion of Impermitek. Following review of the submitted documentation, Impermitek may determine that the photographic documentation is sufficient and waive the requirement for an on-site final inspection. Alternatively, Impermitek reserves the right to require an on-site inspection, supplemental documentation and/or information, and/or corrective or remedial work as a condition for final warranty approval.

Submission of this form, supporting documentation, or completion of any inspection does not, in and of itself, constitute approval or issuance of an Impermitek warranty. Final warranty approval remains subject to Impermitek's review and written approval in accordance with the applicable warranty terms and conditions.
